Re: LEED Documentation for Bull Moose Tube Company

Bull Moose Tube Company utilizes steel produced from both the Basic Oxygen Furnace (BOF) process and Electric Arc Furnace (EAF) process in the production of all Tubing Products.

Based upon the relative proportions of each suppliers' product used, approximate recycled contents for each plant are as follows:

BMT Plant Location	Total Recycled Content	Post-Consumer Recycled Content	Post-Industrial Recycled Content
Gerald, MO	49%	52%	7%
Trenton, GA	51%	40%	16%
Chicago Heights, IL	83%	77%	7%
Burlington, ON	30%	32%	21%
Elkhart, IN	57%	44%	8%
Casa Grande, AZ	55%	54%	11%
Masury, OH	43%	52%	3%
Sinton, TX	72%	58%	42%

The above total recycled content conforms to the general experience indicated by our steel suppliers. It is not an exact measurement of the recycled content of all material provided, but an aggregate calculation across all products provided per-location.

I trust this letter provides the information you require.

Thank you,

Mark Miller
Corporate Quality Manager
